

Word problems

Name _____

Date _____

Read each problem, set out the calculation or equation and write a complete answer.

- 1.** A reading box held some books before Mia added 18. It then contained 45 books altogether. How many books were there at first?

- 2.** Twenty-eight pupils form four equal teams for a playground game. How many pupils are in each team?

- 3.** Three fruit bags hold the same number of apples. Two loose apples make 20 apples altogether. How many apples are in each bag?

- 4.** A baker shares some rolls equally among five baskets. Each basket receives exactly seven rolls. How many rolls did the baker share?

5. A board game costs £34, and Priya has £19. How much more money does Priya need?
